Subject: Fw: Assistance Needed - Very High Naphthalene Value on 6/24/10 for GIO7 Needs Confirmation

Maria,

I checked with START this morning and confirmed the naphthalene concentration 720 ug/cu.m. at GIO7 on 6/24/10. There wasn't anything in the sampler's field notes that would indicate why the one result was high. I also noted that the naphthalene concs. on 6/23 and 6/25 are low.

However, the concentration on 6/25 is a confirmed value.

Thanks,

Don Williams

Folks,

We need some assistance in confirming a value that just appeared in the data review report from the EOC. The data point will be up for discussion today on the Air Data Review call and data posting.

The value is a 720 ug/m3 naphthalene data point from GIO7 analyzed by TO-15. The screening value is 30 ug/m3 for this compound. We already checked the data summary and Sit Rep for that day and found no explanation.

Thanks in advance.

Maria
